14. BACKGROUND SCOPE OF WORK (SOW) SPECIFICATION

African Exploration Mining and Finance Corporation (SOC) Ltd ("AEMFC") is a state-owned Mining Company established to secure South Africa's energy supply primarily through the mining and supply of coal for the generation of electricity, as well as securing other resources that will provide energy for the future, including key minerals for beneficiation in the energy and steel value chain.

As such, AEMFC intends to appoint a suitably Service Provider for the provision of Pit dewatering services at Vlakfontein Mine for a period of five(5) months.

Thus, the Service Provider(s) are requested to provide proposals based on the below Scope of Work (SOW)

14.1. SCOPE OF WORK (SOW) / SPECIFICATION

AEMFC intends to appoint an eligible service provider for the provision of Pit dewatering services at Vlakfontein Mine for a period of five (5) months. The service provider's responsibilities shall include all tasks and resources necessary to pump water from the pit to the Pollution Control Dam(PCD) and maintain the dewatering system in optimal condition. Key elements of the scope are outlined below:

- 14.1.1 Dewatering operations which include the supply, installation, and operation of pumps to continuously transfer water from the pit to the PCD. Pumps may need to run 24/7 or on a schedule to manage the pit water level effectively. The contractor must ensure skilled operators are on hand to start/stop pumps and monitor performance as required. Contingency plans should be in place for heavy rainfall events or sudden inflows;
- 14.1.2 Perform all routine and corrective maintenance on dewatering pumps (diesel-driven) to minimize downtime. This includes inspections, servicing (fuel and oil filters, etc.), and on-site repairs as and when needed. The contractor is responsible for all care and maintenance of the machinery and equipment, including providing necessary spare parts and consumables. Any pump failures must be addressed promptly by qualified technicians to restore operation;
- 14.1.3 Install and maintain the pipeline network that carries water from the pit to the PCD utilising a TLB machine for the pipes handling. As the pit expands or water level changes, the service provider will extend or modify high-density polyethylene (HDPE) pipelines accordingly. This includes performing HDPE pipe welding (butt-welding or electrofusion) to add new pipe sections, as well as repairing any leaks or damaged pipe segments. All pipeline joints, fittings (flanges, couplings, etc.), and supports should be made secure and leak-free. The contractor must have qualified welders and necessary equipment to weld

and fuse pipes on site. Pipe diameters and materials will be as per the mine's dewatering design.

- 14.1.4 Provide on-site supervision and skilled personnel to oversee the dewatering operations. A competent supervisor should be present to coordinate pump operation schedules, pipeline extensions, and crew tasks. The team should include pump operators, mechanics/technicians, and welders/fitters as needed to carry out the work. The contractor's team is expected to be available full-time (24/7 coverage) if required, to respond to any operational issues or emergencies. Proper shift rotation should be implemented to ensure continuous monitoring of pumps (especially during heavy rain or critical times).
- 14.1.5 Manage all aspects of pump refueling and power supply for the dewatering system. The contractor must regularly refuel pumps (with diesel either supplied by the mine or by the contractor as agreed) and ensure adequate fuel is on hand to avoid stoppages. Safe fuel handling practices must be followed to prevent spills or accidents. The contractor shall track and report fuel usage for each pump if the fuel is provided by the mine, to maintain accountability.
